SELECTION FACTORS

EXPERT VIEWPOINT

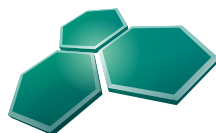

The male PS 59 is a parental male from white giant breeds. Its selection is based on a slaughter weight between 70 and 91 days, feed conversion ratio and breeding viability, and, mainly, on maximising carcass yield, measured since 1987. These selection efforts make it the best candidate to improve the value of the final product.

EXPECTED PERFORMANCE

- ▶ High live weight
- ▶ **1,300–1,900 kg**
carcass weight between 70 and 91 days of age
- ▶ High sperm production
- ▶ Ease of collection
