PS HYPLUS OPTIMA

♀ GP OPTIMA + ♂ GP25

FEMALE QUALITIES

Adapted size, preparation and handling simplified

Milk capacity and ease of nursing

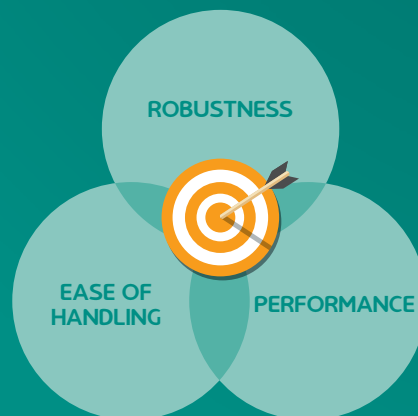

Selection on resistance to infectious disorders

Kits homogeneity

SELECTION AXES

EXPERT VIEWPOINT

The PS Hyplus OPTIMA female inherited the challenge selection on resistance to infectious disorders from the GP25 male, but also all the sustainability work carried out on the GP OPTIMA female. This parental female was designed to respond to an actual cost reduction model, by optimising the sellable carcass kilos per AI. The common threads of this approach were the reduction in medication, animal welfare and breeder well-being. The results of our field trials confirmed the performance estimated in our genetic predictions. The PS Hyplus OPTIMA female is proof that the quest for performance does not exclude ease of handling and robustness.
